

# UPDATED SCASNY-NADEN OUTLOOKS

Prepared SEP22, 2016

## 4 MONTH "SEASONAL BIG PICTURE" TRENDS SUMMARY

TROPICAL PACIFIC SST ANOMALIES CONTINUE TO SHOW A COOL, "LA NINA-ISH" BIASLOOK, AND WHILE SOI INDEX VALUES HAVE SHARPLY RISEN DURING SEPTEMBER, A FULL FLEDGE LA NINA HAS NOT DEVELOPED – LOOKS MORE LIKE A COOL BIAS MODIKI SITUATION. So, as we head into the last quarter of 2016, EXPECT A MUCH MUTED AND MODIFIED VERSION OF STATISTICAL LA NINA TEMPERATURE AND PRECIPITATION RISKS. THIS SITUATION, AND LACKING A FULLY DEVELOPED LA NINA INTO EARLY 2017, AND OTHER UNUSUAL ATMOSPHERIC CONDITIONS CAUSES GREATER OVERALL UNCERTAINTY IN MONTH TO MONTH PATTERS. HOWEVER, A DRIER SOUTHEAST AND SOUTHWEST AND "WETTER" NORTH CENTRAL US APPEARS TO BE A FEW STRONGER STANDOUT OUTLOOK PERIOD PATTERNS.

← **ATL TROPICAL ACTIVITY WANES** →

ATLANTIC TROPICAL ACTIVITY  
NOT INCLUDED FOR SOUTHERN AND ATLANTIC STATES.  
RISKS STILL HIGHEST FOR IMPACTING IN THE GULF, S. FL, AND MID ATLANTIC
